Charts other lishi lock user manual Before installing a Lishi tool you will need to understand a few things about the lock you intend to change. Always make sure that the 2 in 1 instructions apply to your Lishi lock. Prior to using the instructions provided in the User Guide and this Instruction manual, you should understand the following: Once the tool has been removed from the Lishi handle, it is important to know what movement direction the wrench will be used in when it is in the unlock mode. The way this is done is by putting a pin in the spindle. The pin is located at the top of the wrench when in the unlock mode. The arrow on the pin will be pointing out. The arrow will be pointing towards the top of the spindle and down. If the pin is not in the wrench you will not know the direction the wrench will move. The instructions will only work if you know this information. This information is provided in the following chart. This will be the movement direction of the wrench when the tools are unlocked. Warning: The wrench handle is the most important part of the tool and the pin should not be removed from the wrench. If you take the pin out of the wrench, you will no longer be able to use it. Your lock is set to pin code lock or combination lock? To pin code or combination lock: The combination locks will have numbers on the key pad, the pin code locks will have numbers or letters on the key pad. If you are unsure of how the lock is set make sure to contact the lock manufacturer. This information is not available to the customer. Pins (Keys) The combination lock has a key in the lock. The pin code lock has a code in the lock. These can be removed and replaced by the correct pin and key combination. The instructions will only work if you know the pins and keys for the combination lock or pin code lock you are using. If you do not know the pins or keys for the combination or pin code lock you are using, you should contact the lock manufacturer. This information is not available to the customer.
